This chapter opens up a new part of calculus. It is multidimensional calculus, because the subject moves into more dimensions. In the first ten chapters, all functions depended on time t or position x -but not both. We had $f(t)$ or $y(x)$. The graphs were curves in a plane. There was one independent variable (x or t) and one dependent

Calculus TENTH EDITION*

The right way to begin a calculus book is with calculus. This chapter will jump directly into the two problems that the subject was invented to solve. You will see what the questions are, and you will see an important part of the answer. There are plenty of good things left for the other chapters, so why not get started?
