 ABSTRACT One of the critical unanswered questions in genome biophysics is

Connect The experiments of Hershey and Chase confirmed that DNA carries the genetic information, but they left other big questions unanswered: What exactly is this genetic information? How does DNA store this information? Scientists in the early 1950s still had a limited knowledge of the structure of DNA, but that was about to change

How does DNA store this information? Scientists in the early 1950s still had a limited knowledge of the structure of DNA, but that was about to change dramatically.

4. List five DNA code questions that, according to Marshall Nirenberg, are still unanswered. How did the code originate? Is there a reason UUU codes for phenylalanine? Is there a physical reason for the code? Did the code evolve from a series of precursor codes? Was the origin of the code one rare event that was then maintained throughout

A Study of Some "Hard to Formulate" Biology Questions Working Note 33 Peter Clark, Boeing Research, June 2009 Introduction The below set of 22 questions was selected from the 50 final evaluation questions to focus question formulation research during the 2009 Halo work on question-asking.

Finally, we will discuss the major unanswered questions in understanding the flexibility of nucleic acids. 2. Flexibility of ssDNA and ssRNA The ss chain is an elementary structural and functional segment of nucleic acids. For example, RNA structures generally consist of different types of loops, and the ss chain also

The structure and function of polypeptides, especially enzymes, should be reviewed in some inquiry-based manner (e.g., teacher-provided questions or student-generated visual representations) because the processes of DNA replication, transcription,

DNA carries the genetic information of cells. How many exam questions on this subject I have marked I do not know - with all their confusions between thiamine and thymine, guanine guanidine, the Pauling and Corey a-helical structure for peptides and Watson Crick struc- ture for DNA. I wonder how many students
